# Table of Guides

The following is a list of Guides used in this text.

#### **CHAPTER 2**

Setting Up Appropriate Classes for a Frequency Distribution, p. 38 Comparing Histograms, p. 60

## **CHAPTER 3**

Choosing a Measure of Central Tendency, p. 114 Choosing a Measure of Variability, p. 131 Choosing a Measure of Association, p. 142

### **CHAPTER 6**

Using the Sampling Distribution of  $\overline{x}$  to Decide About  $\mu$  When  $\sigma$  Is Known, p. 243 Using the Sampling Distribution of  $\hat{p}$  to Decide About p, p. 252

### CHAPTER 7

Calculating *p*-Values, p. 266 Steps in a Formal Hypothesis Test, p. 268 Hypothesis Test to Decide About a Population Proportion, p. 274 Hypothesis Test to Decide About a Population Mean, p. 288

#### **CHAPTER 8**

Creating a Confidence Interval Estimate for *p*, p. 304
Creating a Confidence Interval Estimate for μ, p. 309
Choosing the Sample Size to Estimate μ, p. 314
Choosing the Sample Size to Estimate *p*, p. 316

#### **CHAPTER 9**

Matched Pairs, Quantitative Data, Normal Differences—The *t*-Test to Decide About the Average Population Difference ( $\mu_{
ho}$ ), p. 335 Matched Pairs, Quantitative Data, Non-Normal Differences—The Wilcoxon Signed Rank Sum Test to Decide About the Difference in Matched Populations, p. 352 Matched Pairs, Ranked Data—The Sign Test to

Decide About the Difference in Matched Populations, p. 361

### **CHAPTER 10**

Independent Samples, Normal Quantitative Data— The *t*-Test of  $\mu_1 - \mu_2$  to Decide About the Difference in Two Population Means, p. 380 Independent Samples, Non-Normal Quantitative Data or Ranked Data—The Wilcoxon Rank Sum Test to Decide About the Difference in Two Population Locations, p. 391

## **CHAPTER 11**

Three or More Independent Samples, Normal Quantitative Data—One-Way ANOVA to Decide About the Equality of Population Means, p. 419

#### **CHAPTER 12**

Comparing Two Population Proportions, p. 445  $\chi^2$  Goodness-of-Fit Test to Compare Proportions in One Population with a Desired Distribution, p. 457 Contingency Table Tests to Compare Proportions Across Many Populations, or Decide About the Independence of Population Characteristics, p. 466

#### **CHAPTER 13**

Checking Requirements for the Linear Regression Model, p. 504 Testing the Slope of the Regression Line for Evidence of a Linear Relationship, p. 509

#### **CHAPTER 14**

Checking Requirements for the Linear Multiple Regression Model, p. 540

# Table of Excel Instructions and Excel Templates

The following is a list of Excel instructions and templates used in this text. Note: Excel's Data Analysis Tools may need to be turned on. See Using Microsoft<sup>®</sup> Excel for Analyzing Data and Making Decisions on page xxvi for more information.

#### **CHAPTER 1**

Taking a Random Sample with Random Number Generation, p. 8

### **CHAPTER 2**

Class Width Template, p. 34 Histogram Tool, p. 39 Histogram Chart, Exhibit 2.29, p. 45 Adjusting Excel's Histogram, p. 46 Bar Graph, p. 63 Pie Chart, p. 64 Contingency Table, p. 67 Line Graph, p. 72 Scatter Diagram, p. 77 Adjust Axis Scale, p. 81

#### **CHAPTER 3**

MEDIAN Function, p. 109 MODE Function, p. 112 STDEV Function, p. 118 QUARTILE Function, p. 129 PEARSON Function, p. 134 Non-Parametric Tools, p. 141 Spearman Rank Correlation Coefficient Calculation, p. 141

#### **CHAPTER 5**

BINOMDIST Function, p. 195 NORMDIST Function, p. 205 NORMINV Function, p. 209

### **CHAPTER 7**

Organizing Coded Data, p. 271 Excel Template for Making Decisions About a Population Proportion with a Single Sample, p. 272 TDIST Function, p. 279 Excel Template for Making Decisions About the Population Mean with a Single Sample, p. 280 AVERAGE/STDEV/COUNT Functions, p. 281

## **CHAPTER 8**

Excel Template for a Confidence Interval Estimate of the Population Proportion, Exhibit 8.8, p. 305 Excel Template for a Confidence Interval Estimate of the Population Mean, Exhibit 8.14, p. 311

#### **CHAPTER 9**

Excel Template for Making Decisions About the Population Mean with a Single Sample for Matched Pairs, p. 330 Data Analysis *t*-Test: Paired Two Sample for Means, p. 330 Excel Template for a Confidence Interval Estimate of  $\mu_D$ , Exhibit 9.13, p. 337 Wilcoxon Signed Rank Sum Test Calculations, p. 347 Sign Test Calculations, Add-In and Template, p. 358

#### CHAPTER 10

Data Analysis t-Test: Two-Sample Assuming Unequal Variances, p. 373 Excel Template for t-Test of Mean, p. 378 Excel Template for Confidence Interval Estimate for the Difference in Population Means, p. 382 Wilcoxon Rank Sum Test Calculations Add-In and Template, p. 388

## **CHAPTER 11**

VAR Function, p. 406 FDIST Function, p. 414 Data Analysis Anova: Single Factor, p. 414 Excel Template for the Tukey-Kramer Confidence Interval, p. 426

## **CHAPTER 12**

Excel Template for Making Decisions About Two Population Proportions,  $H_0: p_1 - p_2 = 0$ , p. 442 Excel Template for Making Decisions About the Difference in Population Proportions,  $H_0: p_1 - p_2 =$  Fixed Amount, p. 444 Excel Template for the Confidence Interval Estimate for the Difference in Population Proportions, p. 447 Excel's CHITEST Function for a  $\chi^2$ Goodness-of-Fit Test, p. 456 Chi-Squared Expected Values Calculations, p. 462

### **CHAPTER 13**

Add Trendline, Exhibit 13.5, p. 483
Regression Tool, p. 485
Regression Residuals, p. 492
Regression Output for Hypothesis Test About the Regression Relationship, p. 507
Regression output for *R*<sup>2</sup>, p. 511
Multiple Regression Tools for Confidence and Prediction Intervals, p. 514

## **CHAPTER 14**

Regression Tool for Multiple Regression, Exhibit 14.4, p. 530 Residual Output, p. 532 Plots of Residuals VS. Predicted Values, p. 533 Residual Plots, p. 534 Confidence Interval and Prediction Intervals – Calculations, p. 548 All Possible Regressions Calculations, p. 552

# Table of Examples

The following is a list of Examples used in this text.

#### **CHAPTER 1**

Example	1.1	Secondary data, p. 3
Example	1.2A	Nonstatistical sampling, p. 6
Example	1.2B	Nonstatistical sampling, p. 6
Example	1.2C	Random sampling with Excel, p. 8
Example	1.3	Analyzing the data, p. 13
Example	1.4A	Cause and effect cannot be conclude
		from observational studies, p. 16
Example	1.4B	Cause and effect may be concluded
		from experimental studies, p. 16
Example	1.5	State conclusions carefully, p. 18

# **CHAPTER 2**

Example 2.2A	Setting up a frequency distribution
	with Excel, p. 42
Example 2.2B	Modifying Excel's automatic
	histogram, p. 51
Example 2.3	Using Excel to create a bar graph with
	coded data, p. 64
Example 2.4	Graphing time-series data, p. 73
Example 2.5	Graphing paired quantitative
	data, p. 77

# **CHAPTER 3**

Example	3.1A	Evaluating	Σ <i>x</i> , p. 103
Example	3.1B	Evaluating	$\Sigma x^2$ , p. 103
Example	3.1C	Evaluating	$(\Sigma x)^2$ , p. 103
Example	3.1D	Evaluating	Σ <i>xy</i> , p. 103
Example	3.1E	Evaluating	$\Sigma(x-6)$ , p. 104
Example	3.1F	Evaluating	$\Sigma(x - 6)^2$ , p. 104
Example	3.1G	Evaluating	$\Sigma \frac{(x-6)^2}{n-1}$ , p. 104
Example	3.1H	Evaluating p. 104	$\Sigma(x-6)(y-3),$

Example 3.2A	Using Excel to calculate <mark>the</mark> mean, p. 107
Example 3.2B	The mean is greatly affe <mark>ctedby</mark> extreme values, p. 108
Example 3.2C	Finding the median in a <mark>data set,</mark> p. 109
Example 3.3A	Calculating standard deviation with Excel, p. 118
Example 3.3B	Calculating the standard deviation with the computational formula, p. 119
Example 3.3C	Applying the Empirical Rule, p. 126
Example 3.3D	Finding the 75 <sup>th</sup> percentile, p. 128
Example 3.3E	Calculate the interquartile range, p. 129
Example 3.4A	Calculating the Pearson correlation coefficient, p. 138
Example 3.4B	Calculating the Spearma <mark>n rank</mark> correlation coefficient, p <mark>. 139</mark>

# **CHAPTER 4**

Example 4.1	Representing a sample space with a
	contingency table, a joint probability
	table, and a tree diagram, p. 157
Example 4.2A	Calculating conditional probabilities, p. 162
Example 4.2B	Testing for independence, p. 163
Example 4.3A	The rule of multiplication: calculating "and" probability, p. 169
Example 4.3B	The rule of addition: calculating "or" probabilities, p. 172
Example 4.3C	Calculating probabilities with a tree diagram and probability rules, p. 175

## **CHAPTER 5**

Example 5.1	Calculating the mean and standard
	deviation of a discrete probability
	distribution, p. 188
Example 5.2A	Calculating binomial probabilities
	with a formula, p. 195

Example 5.2B	Using Excel to calculate the binomial
	probabilities, p. 197
Example 5.2C	Calculating binomial probabilities
	with tables, p. 200
Example 5.3A	Calculating normal probabilities with
	NORMDIST, p. 206
Example 5.3B	Using NORMINV to calculate x-values
	for normal probabilities, p. 209
Example 5.3C	Calculating normal probabilities with
•	a table, p. 215
	/ <b>1</b>

## **CHAPTER 6**

Example 6.1A	Using a sampling distribution to
	decide if a sample mean is unusual,
	p. 230
Example 6.1B	Using a sampling distribution to
·	decide whether a sample proportion
	is unusual. p. 231
Example 6.2A	Constructing a sampling distribution
	and using it to decide about a
	population mean, p. 235
Example 6.2B	Assessing population normality,
·	constructing a sampling distribution.
	and using it to decide about a
	population mean, p. 241
Example 6.3A	Using the binomial distribution to
·	make a decision about a population
	proportion, p. 245
Example 6.3B	Using the sampling distribution
·	of $\hat{p}$ to make a decision about a
	population proportion, p. 250
Example 6.3c	Using the sampling distribution
•	of $\hat{p}$ to make a decision about a
	population proportion, p. 251
	peparation propertient, primer

# **CHAPTER 7**

Example 7.1A	Setting up correct null and alterna-
	tive hypotheses, p. 260
Example 7.1B	Type I and Type II errors, p. 264
Example 7.1C	Calculating <i>p</i> -values, p. 267
Example 7.2A	Hypothesis test about a population
	proportion, summary data, p. 269
Example 7.2B	Hypothesis test about a population
	proportion with coded data, p. 271
Example 7.3A	Right-talled hypothesis test about
	a population mean, p. 277
Example 7.3b	Right-tailed hypothesis test about
	a population mean, p. 281
Example 7.3C	Estimating <i>p</i> -values from the table
	of critical values for the
	t-distribution, p. 285
Example 7.3D	Two-tailed hypothesis test about
	apopulation mean, p. 287

## **CHAPTER 8**

Example 8.1	Constructing a confidence interval
	estimate for <i>p</i> , p. 304
Example 8.2	Constructing a confidence interval
	estimate for $\mu$ , p. 309
Example 8.3A	Deciding on sample size to
	estimate $\mu$ , p. 315
Example 8.3B	Deciding on sample size to
	estimate p, p. 316
Example 8.4	Using a confidence interval for a
	hypothesis test, p. 318

## **CHAPTER 9**

28
32
5
ļ

# **CHAPTER 10**

Example	10.1A	<i>t</i> -Test for independent samples,
		using Excel, p. 374
Example	10.1B	<i>t</i> -Test for independent samples,
		using <i>t</i> -table, p. 377
Example	10.1C	Confidence interval for difference in
		means, p. 381
Example	10.2A	Wilcoxon Rank Sum Test, sample
		sizes $\geq$ 10, p. 385
Example	10.2B	Wilcoxon Rank Sum Test, sample
		size $<$ 10, p. 389

## **CHAPTER 11**

Example 11.1	Checking	conditions	for	one-factor
	ANOVA, p	. 405		

- Example 11.2 One-factor ANOVA, p. 416
- Example 11.3 Using the Tukey-Kramer approach to find out which means differ, p. 424

## CHAPTER 12

Example 12.1A	Comparing two proportions,
	no difference in proportions,
	coded data, p. 441

Example 12.1B Comparing two proportions, non-zero difference in proportions, p. 443

Exampl	е	12.1C	Confidence interval for difference in	
			proportions, p. 446	
			2	

- Example 12.2A  $\chi^2$  goodness-of-fit test, p. 450 Example 12.2B Goodness-of-fit test, adjusting
- when  $e_i < 5$ , p. 453 Example 12.3A Contingency table test, comparing
- many populations, p. 460
- Example 12.3B Contingency table test for independence, p. 465

## **CHAPTER 13**

- Example 13.2 Influential observations, p. 498
- Example 13.3 Hypothesis test of  $\beta_1$  with Excel, p. 508
- Example 13.4 Interpreting  $R^2$ , p. 512
- Example 13.5 Calculating a confidence interval estimate for an average y, given x, p. 518

## **CHAPTER 14**

- Example 14.2 Checking conditions for linear multiple regression, p. 537 Example 14.3A Hypothesis test of significance of
- regression model, p. 543
- Example 14.3B Hypothesis tests of individual coefficients in regression model, p. 545
- Example 14.4 Calculating confidence and prediction intervals with Excel, p. 549
- Example 14.5A Assess all possible regressions, p. 554
- Example 14.5B Multiple regression, dealing with collinearity, p. 558
- Example 14.6 Regression with a qualitative explanatory variable, p. 562
